Empathy Map

Create an empathy map to understand your customer/user from four perspectives — what they Say, Think, Do, and Feel — in relation to the problem your project addresses. This helps the team build a customer-centric solution.

TARGET PERSONA: Alex Rivera | Age: 29 | Role: Urban Tech Professional & Fitness Enthusiast | Goal: Optimal Nutrition & Zero Food Waste

SAYS (What they express openly) • 'I wish I could just take a photo of my meal and know the exact protein and calories without guessing.' • 'Is this spinach still fresh enough for a salad or should I cook it today?' • 'I hate touching my phone screen with greasy or flour-covered hands when following a recipe.' • 'I want a meal plan that actually respects my peanut allergy and weight loss targets.'	**THINKS (Internal mindset & doubts)** • 'Am I really hitting my daily macronutrient goals, or am I underestimating portion sizes?' • 'How much money am I wasting every month throwing away moldy produce?' • 'Restaurant kitchens should have automated hygiene audits so customers don't get sick.' • 'Cooking healthy feels like a chore when I don't know what to make with what's in my fridge.'
DOES (Observable actions & behaviors) • Takes photos of daily plates to visually remember what was consumed. • Sniffs produce and cuts off brown spots, uncertain if bacterial mold has spread internally. • Uses voice commands or asks smart speakers for quick ingredient conversions while cooking. • Abandons traditional calorie-counting apps after 4 days because manual typing is too tedious.	**FEELS (Emotional state & pain points)** • **Frustrated:** By tedious manual food logging and inaccurate nutrient databases. • **Guilty:** When throwing away half-used vegetables that spoiled in the crisper. • **Anxious:** About hidden cross-contamination allergens in commercial dining. • **Empowered:** When receiving immediate, scientific, multi-sensory dietary feedback.
