Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1: Food Ingestion & Scan	Stage 2: Freshness & Safety Verification	Stage 3: Interactive Kitchen Guidance	Stage 4: Long-Term Adaptive Planning
Actions (What does the customer do?)	Snaps a photo of food plate or speaks meal description into voice recorder.	Uploads image of produce or kitchen prep station to check spoilage or sanitization.	Requests step-by-step cooking recipe based on fridge items; asks hands-free voice Q&A.;	Inputs biometric parameters, fitness goals, and medical allergies to generate meal schedule.
Touchpoint (What part of service is used?)	Food Recognition Scanner UI (/api/food-recognition/analyze).	Freshness Inspector & Hygiene Auditor (/api/freshness-detector & /api/hygiene-monitor).	Smart Cooking Assistant (/api/kitchen-assistant/generate-recipe & /ask-assistant).	Precision Meal Planner Dashboard (/api/meal-planner/profile & /generate-plan).
Customer Thought (What are they thinking?)	'Will it recognize both the rice and the protein accurately without manual logging?'	'Is this vegetable safe to eat or should I trim/freeze it before it rots?'	'Can I cook this safely with what I have on hand without burning anything?'	'Will this meal plan keep me full while safely excluding all my declared allergens?'
Customer Feeling (Emotion / Sentiment)	Curious, relieved by instant visual macro breakdown.	Reassured by scientific browning score and storage advice.	Confident, in control, and supported by hands-free chef tips.	Motivated, organized, and stress-free about grocery schedules.
Process Ownership (Who leads this?)	Multimodal LLM Engine (Groq Qwen 3.8 Multimodal) + Whisper Audio Transcriber.	OpenCV Image Processing (HSV color std, Laplacian gradient) + Health Inspector AI.	Executive Chef LLM Reasoning Engine + Real-Time Audio Query Handler.	Clinical Dietitian Rules Engine + Mifflin-St Jeor Metabolic Optimizer.
Opportunities (How can we improve stage?)	Provide micro-nutrient breakdowns (iron, vitamin D, sodium density).	Integrate multi-spectral smartphone camera sensors for subsurface fungal detection.	Add conversational voice-interrupt without needing button push.	Direct 1-click export of grocery shopping list to local delivery platforms.
